Excellent Technology for Evolving Industries

Harmonic Drive™ actuators utilize high-precision, zero-backlash Harmonic Drive™ precision gears and play critical roles in robotics, semiconductor manufacturing equipment, factory automation equipment, medical diagnostics and surgical robotics. Additionally, our products are frequently used in mission-critical spaceflight applications which capture the human spirit.

We are proud of our outstanding engineering capabilities that have led to the development of our product line of high performance actuators. We also provide high precision, customer specific solutions to meet application requirements.

Harmonic Drive LLC continues to develop enabling technologies for the evolving motion control market, which drives the pace of global innovation.

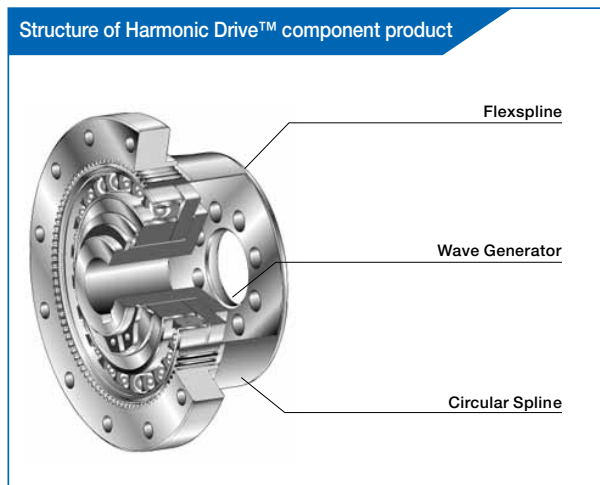

Harmonic Drive™ High-Precision Strain Wave Gearing

Features

- High positioning accuracy
- High repeatability
- Compactness
- Light weight, High reduction ratio,
- High torque capacity
- Zero Backlash
- High efficiency
- Quiet operation

Structure

Utilizing a unique operating principle, the gear consists of only 3 basic parts (Wave Generator, Flexspline, and Circular Spline). It provides excellent features not found in other speed reducers.

Wave Generator

The Wave Generator is a thin raced ball bearing fitted onto an elliptical hub. This serves as a high efficiency torque converter and is generally mounted onto the input or motor shaft.

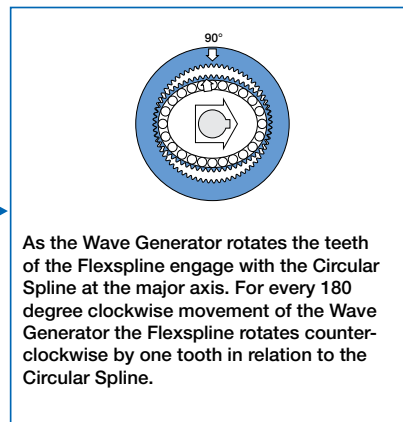

Flexspline

The Flexspline is a non-rigid, thin cylindrical cup with external teeth on the open end of the cup. The Flexspline fits over the Wave Generator and takes on its elliptical shape. The Flexspline is generally used as the output of the gear.

Circular Spline

The Circular Spline is a rigid ring with internal teeth. It engages the teeth of the Flexspline across the major axis of the Wave Generator ellipse. The Circular Spline has two more teeth than the Flexspline and is generally mounted onto a housing.

Operating Principle

Tooth engagement

The strain wave gear has a unique tooth engagement which results in a Zero-backlash gear mesh that provides high positional accuracy and high torque with a compact form factor.

The Harmonic Drive™ strain wave gear utilizes a unique gear tooth profile which is optimized for its unique tooth engagement. Unlike an involute tooth profile, which is used in conventional gears, this optimized tooth profile ("IH tooth") enables about 30% of the total number of teeth to be engaged at the same time. This technological innovation results in high torque, high torsional stiffness, long life and smooth rotation.

The "IH" tooth profile eliminates stress concentration by widening the tooth root and providing a large tooth root radius. This figure shows the progression of the Flexspline tooth engagement as it meshes with the teeth of the fixed Circular Spline.

Hollow Shaft Brushless Actuators FHA-C Mini Series

These servo actuators utilize precision Harmonic Drive™ precision gear combined with a performance matched brushless servo motor and incremental encoder. The cube shaped form factor is very compact and features a through hole in the center of the shaft. This hollow shaft may be used to pass cables, tubing or a laser beam through the axis of rotation.

The FHA-mini series is designed to operate with a wide range of third-party drivers, as well as Harmonic Drive LLC's DDP Series, DCJ Series, DEP Series, HA655 and HA675 drivers.

- Large Center Through Hole
- Compact Design
- Body width from 50 mm to 75mm
- Body length from 48.5 mm to 66 mm

Hollow Shaft Brushless Actuators FHA-C Series

These servo actuators utilize precision Harmonic Drive™ precision gear combined with a performance matched brushless servo motor and incremental encoder. Absolute encoders are also available as an option. The FHA has a low profile form factor and features a hollow shaft through the center of the output. This hollow shaft feature may be used to pass cables, tubing or a laser beam through the axis of rotation.

The FHA series is designed to operate with a wide range of third-party drivers, as well as Harmonic Drive LLC's DDP Series, DEP Series, RTL Series, HA655 and HA675 drivers.

- High torque
- Large center through hole
- Compact cylindrical design

Hollow Shaft Brushless Actuators

SHA Series

SHA Series AC Servo Actuators provide high torque and highly accurate rotary operation.

These servo actuators utilize Harmonic Drive™ precision gears combined with a brushless servomotor and magnetic absolute encoder. The SHA Series is an advanced version of current FHA series AC Servo Actuators, having larger, hollow structure in a smaller diameter size.

The SHA Series is designed to operate with a wide range of third-party drivers, as well as Harmonic Drive LLC's REL Series and HA-800 drivers,

- High torque
- Compact, slimmed design
- Large center-through hole

Brushless Actuators RSF-Mini Series

These brushless servo actuators utilize zero backlash Harmonic Drive™ precision gears for precise motion control. The RSF Mini Series is designed to operate with a wide range of third party drivers as well as Harmonic Drive LLC's DCJ Series, DDP Series, DEP Series, HA680 drivers.

- Exceptional Positional Accuracy
- Compact design

Brushless Actuators RSF Series

These compact and include high-torque AC servo actuators utilize with high rotational accuracy, a shaft output combining Harmonic Drive™ strain wave gearing for precision control and an AC servo motor. The RSF Series is designed to operate with a wide range of third party drivers as well as Harmonic Drive LLC's RTL Series, REL Series, HA-520 and HA-655 drivers.

- Compact and lightweight
- High power
- High positioning and high rotational accuracies

The KDU Series are Direct Drive Motors which achieve 10 arc-sec positioning accuracy as well as ± 0.5 arc-sec Repeatability with a resolution of 0.16 arc-sec. Also, the KDU has a large Hollow Shaft design which allow cables, shafts or lasers to pass through the axis of rotation.

- Exceptional positional accuracy
- Exceptional repeatability
- Ultra high resolution

Precision Linear Actuators
LBC Series

The precision lead screw provides positioning accuracy in the micron range with sub-micron repeatability. The actuator is capable of thrust forces up to 12,000 N. This product is useful for precise positioning of heavy loads or applications where high force is required such as molding equipment or precision presses.

•LBC Series Ratings

Precision Linear Actuators
LA Series

A precision ball screw provides positioning accuracy better than 2 microns and repeatability of 0.1 microns.

This product is well suited for measuring instruments, test and inspection systems, optical equipment, semiconductor and LCD manufacturing equipment.

- 49 N Force
- 2 micron positioning accuracy
- Brush DC motor with incremental encoder

Precision Linear Actuators

LAH Series

LAH-46

LAH-80

A precision ball screw provides positioning accuracy better than 4 microns and repeatability of 1 micron.

This product is well suited for measuring instruments, test and inspection systems, optical equipment, semiconductor and LCD manufacturing equipment.

- 392 to 3000 N Force
- 4 micron positioning accuracy

LAH-80

Precision Linear Actuators LNP Series

A precision lead screw provides positioning accuracy better than 6 microns and repeatability of 0.5 microns. The LNP also incorporates a high precision linear stage which enables direct mounting of a load to the actuator. Actuators can be combined for two or three axis configurations.

This product is well suited for measuring instruments, test and inspection systems, optical equipment, semiconductor and LCD manufacturing equipment.

- 10 Kg load capacity
- 6 micron positioning accuracy
- Available with Brush DC motor with incremental encoder or stepper motor

LNP*		HS-360-1A-100

• RH,LA,LAH,LNP series actuators will require servo drive encoder when used in conjunction with a HS-360 driver.

Cup Type High Torque CSG Series

- Compact and simple design
- High torque capacity
- High torsional stiffness
- Zero backlash
- High positioning accuracy
- Housed unit type is available (see p. 28)
- 30% higher torque than a CSF unit

L_{10} Life: 10,000 h

Comparison of Features. High Torque Harmonic Drive™ CSG Series vs. CSF Series

Cup Type - Super Flat Type
CSD Series

- Superior axial compactness
- Hollow through bore
- Excellent Repeatability
- Also available with extra large through bore

L₁₀ Life: 7,000 h

Silk Hat Type - High-Torque SHG Series

- Hollow bore units available
- Zero backlash
- Excellent positioning accuracy
- Compact and simple design
- High torque capacity
- High torsional stiffness
- 30% higher torque rating than SHF series

L₁₀ Life: 10,000h

High Torque Type CSG Series

- High torque capacity
- High torsional stiffness
- Compact and simple design
- Zero backlash
- High positioning accuracy
- 30% higher torque than a CSF unit

L_{10} Life: 10,000h

- "Basic dynamic rated load" is a constant stationary radial load that achieves a basic dynamic rated life of the bearing of one million revolutions.
- "Basic static rated load" is a static load that achieves a contact stress of a constant level (408kN/mm²) at the center of a contact zone between the rolling element receiving a maximum load and track.
- The moment stiffnesses are mean values.

Unit High-torque Hollow Shaft / Input Shaft Types
Simple Unit/High-torque Flat, Hollow, High-torque Flat Types

SHG Series

- Large hollow thru bore
- Flat profile
- Zero backlash
- High positioning accuracy
- Compact and simple design
- High torque capacity
- High torsional stiffness
- Shaft input units available
- 30% increased torque compared to SHF Units

L₁₀ Life: 10,000 h

• "Basic dynamic rated load" is a constant stationary radial load that achieves a basic dynamic rated life of the bearing of one million revolutions.
 "Basic static rated load" is a static load that achieves a contact stress of a constant level (408kN/mm²) at the center of a contact zone between the rolling element receiving a maximum load and track.

SHF Series Unit/Standard Type

- Large hollow thru bore
- Flat profile
- Zero backlash
- High positioning accuracy
- Compact and simple design
- High torque capacity
- High torsional stiffness
- Shaft input units available

L_{10} Life: 7,000 h

CSF Mini Series Unit

- Zero backlash, high positioning accuracy
- Compact and lightweight
- High torque capacity
- High radial, axial, and moment load capacity
- Features 4 point contact bearing
- Available in ratios from 30:1 up to 100:1
- Flange output
- Shaft output
- Shaft input and Output

L₁₀ Life: 7,000h

• “Basic dynamic rated load” is a constant stationary radial load that achieves a basic dynamic rated life of the bearing of one million revolutions.
 “Basic static rated load” is a static load that achieves a contact stress of a constant level (4kN/mm²) at the center of a contact zone between the rolling element receiving a maximum load and track.

Phasing Differential FD Series Unit Type

- Pancake type
- Ultra compact differential unit
- Backlash is very small and unit requires no assembly adjustment.

**High-performance Harmonic Drive™ Gear Head
Quick Connect Type for Servomotors**

Speed reducer

CSF-GH Series

This quick connect design allows easy installation and mounting to a wide variety of servo motors

- Easy mounting to various servomotor manufacturers
- Zero backlash
- High moment capacity cross roller output bearing

L₁₀ Life: 7,000 h

• "Basic dynamic rated load" is a constant stationary radial load that achieves a basic dynamic rated life of the bearing of one million revolutions.
 "Basic static rated load" is a static load that achieves a contact stress of a constant level (4kN/mm²) at the center of a contact zone between the rolling element receiving a maximum load and track.

•Corresponding servomotor capacity

The CSF-GH series is designed to mount to a range of servo motors with output power ranging from 30W to 5000W.

Unit: mm					
Size	14	20	32	45	65
Symbol					
A	60	90	120	170	230

* The length and shape of the motor adapter flange will depend upon the specific motor that is selected for use with the gearhead. Please contact Harmonic Drive LLC for a detailed drawing.

HPG Series

- High precision Planetary gearhead
- Low backlash: Less than 3 arc min (less than 1 arc min optional)
- Reduction ratios between 3:1 and 45:1
- Easy mounting to various servomotor manufacturers
- High torque capacity
- High moment capacity cross roller output bearing
- High efficiency, 90% or higher (85% for Model 14)
- Sealed structure
- Shaft input as well as flange and shaft output versions available

L_{10} Life: 10,000 h

 Left side description: The limited length of the Motor shaft is 81mm.
 Right side description: The limited length of the Motor shaft is 116mm.

Note:
 Dimensions F & G depend on the chosen Motor flange square size.
 Contact Harmonic Drive LLC for special flange motor combination.

HDI Infnit-Indexer® Phase Adjuster

- Fine tune rotational position of shafts and machine parts
- Phase cams
- Adjust roll registration
- Take up backlash in spur and worm gears
- Synchronize indexing devices

Infnit-Indexers® are available from immediate stock in the standard bore sizes shown with keyways, set screws, and tapped holes for face mounting of either hub. It is possible for the user to modify these configurations by disassembling the unit. The hub material is low carbon steel with suitable sizes shown in notes to the dimensional drawings. Additional sizes and configurations are available by special order.

•3 Models, 6 Bore Sizes Available From Stock

HDI Size	Bore Size	O.D.	Length	Torque Capacity
-10	1/2"	2 3/8" (60.33mm)	1 11/16" (42.9mm)	1000 lb-in (113 Nm)
	5/8"			
	3/4"			
-25	3/4"	3" (76.2mm)	2 3/16" (76.2mm)	2500 lb-in (283 Nm)
	1"			
-50	1 1/4"	3 3/4" (95.3mm)	2 3/8" (95.3mm)	5000 lb-in (565 Nm)

To operate, hand rotate the adjusting ring in either direction to produce a 100:1 reduction between the ring and the output. Adjust the friction adjustment/locking screw to desired resistance. For some applications, one adjustment will be sufficient for both shaft turning and phase adjusting modes. For more severe loading, such as hard stops or high peak torque situations, the friction adjustment/locking screw may be used to lock the adjusting ring in place to maintain phase.
