Compact, High Ratio, In-Line Gearing

Harmonic Drive HDUF “Pancake” type component set offers the designer high ratio, in-line mechanical power transmissions in extremely compact configurations. The component set consists of four elements: the Wave generator, an elliptical bearing assembly; the Flexspline, a non-rigid ring with external teeth; and the Circular Spline and the Dynamic Spline, rigid internal gears.

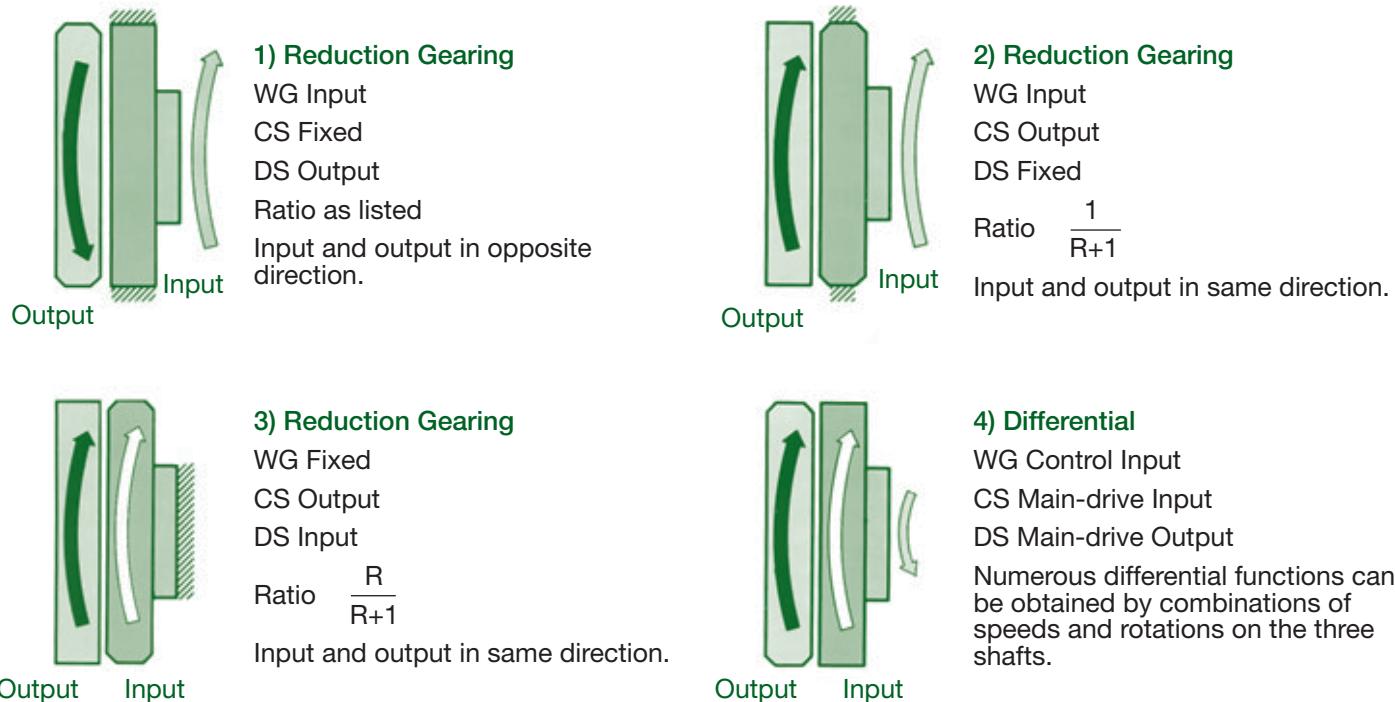

Rotation of the Wave Generator imparts a rotating elliptical shape to the Flexspline causing progressive engagement of its external teeth with the internal teeth of the Circular Spline and the Dynamic Spline. The fixed Circular Spline has two more teeth than the Flexspline, thereby imparting relative rotation to the Flexspline at a reduction ratio corresponding to the difference in the number of teeth. With the same number of teeth, the Dynamic Spline rotates with and at the same speed as the Flexspline.

The Basic Component Set

- 1) The Wave generator (WG) is a thin raced bearings assembly fitted onto an elliptical plug, and normally is the rotating input member.
- 2) The Flexspline (FS) is a non-rigid ring with external teeth on a slightly smaller pitch diameter than the Circular Spline. It is fitted over and is elastically deflected by the Wave Generator.
- 3) The Circular Spline (CS) is a rigid ring with internal teeth, engaging the teeth of the Flexspline across the major axis of the Wave Generator.
- 4) The Dynamic Spline (DS) is a rigid ring having internal teeth of same number as the Flexspline. It rotates together with the Flexspline and serves as the output member. It is identified by chamfered corners at its outside diameter.

Configurations

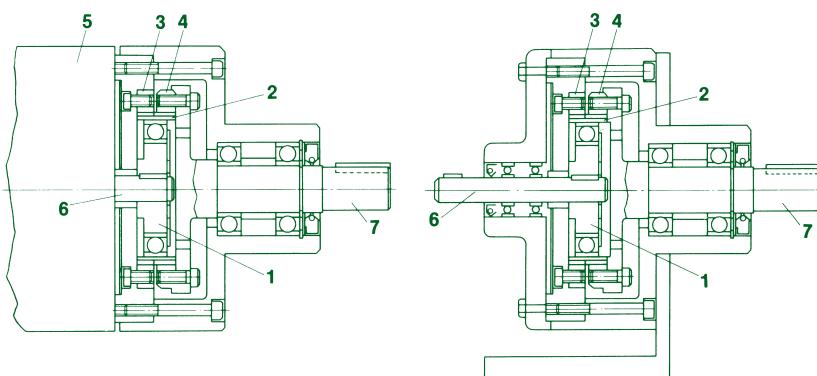

Typical Installation

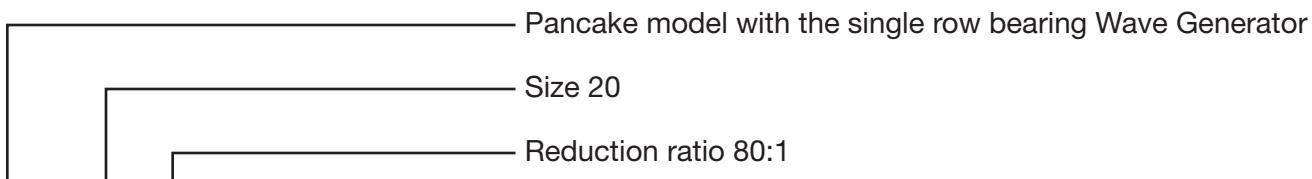

HDUF “pancake” type component sets are easier to use than conventional gearing. All that is required is suitable bearing support for the input and output shaft, and a means of fixing the circular spline against rotation.

The simplicity of HDUF component sets is demonstrated in the typical arrangements shown below.

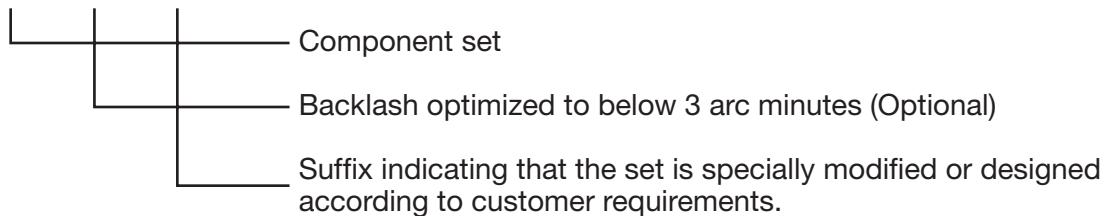

1. Wave Generator
2. Flexsplines
3. Circular Spline
4. Dynamic Spline
5. Motor
6. Input Shaft or Motor Shaft
7. Output Shaft

50	3500	3000	9.9	3.4	3	23	

* Thermal limited—50% duty cycle with on time not exceeding 15 minutes.

** This torque is not to be exceeded under any circumstances.

*** Rating at input speed below 500 rpm is same as for 500 rpm.

**** Backlash measured at output with the input locked, maximum value.

Lubrication

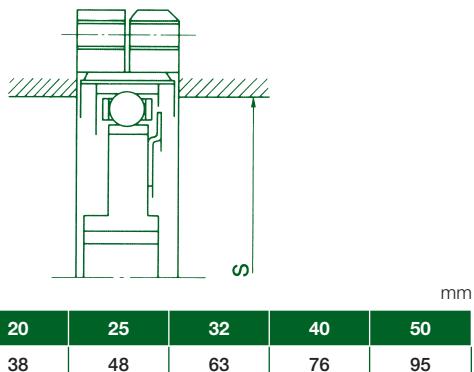

Oil lubrication ratings are based on Molub Alloy gear Oil No. 80. See table for recommended oil level and volume for horizontal shaft mounting.

For vertical mounting the recommended level is at the wave generator bearing ball centerline or midpoint of the drive.

HDUF	14	20	25	32	40	50
Oil Level Below Drive Centerline	mm	7.6	12.7	15.2	17.8	23.0
Minimum Oil Volume	cc	50	50	100	150	250
	fl-oz	1.5	1.5	3	5	8
						16

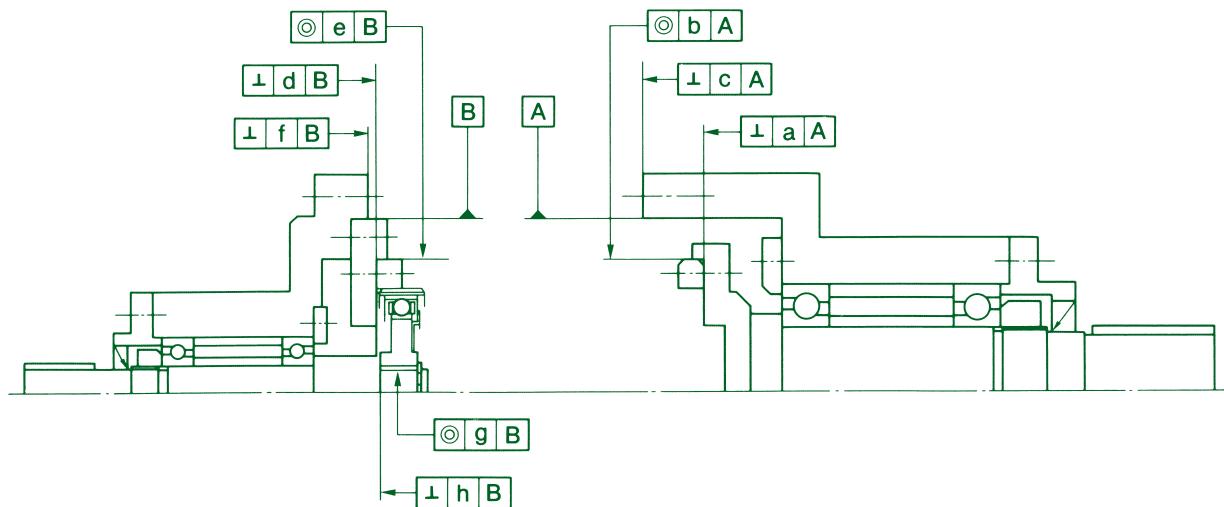

Grease lubricated ratings are based on Harmonic Grease HC-1, which has been specially developed for Harmonic Drive lubrication. Alternate lubricants include Molub Alloy Grease No. 2, Shell Alvania EP 1 and their equivalents.

For retention of grease within the tooth mesh area and the ball bearing, it is recommended that the L dimension (see HDUF Dimensions, page 4) be extended further inward to at least S.

Installation

The Dynamic Spline is distinguished by its chamfered outer edge. HDUF Component Sets may be operated in any attitude. Recommended installed relationships are shown below:

Housing Tolerance

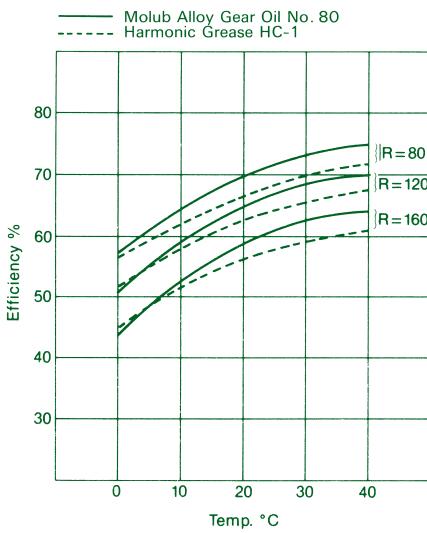

HDUF	a	b	c	d	e	f	g	h
14	0.013	0.015	0.016	0.013	0.015	0.016	0.011	0.007
20	0.017	0.016	0.020	0.017	0.016	0.020	0.013	0.010
25	0.024	0.016	0.029	0.024	0.016	0.029	0.016	0.012
32	0.026	0.017	0.031	0.026	0.017	0.031	0.016	0.012
40	0.026	0.019	0.031	0.026	0.019	0.031	0.017	0.012
50	0.028	0.024	0.034	0.028	0.024	0.034	0.021	0.015

Efficiency

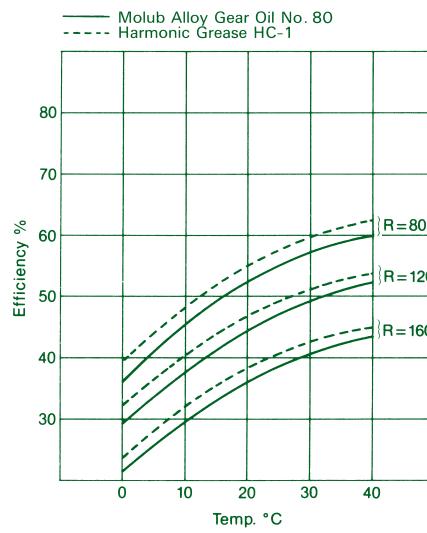

Efficiency varies depending on input speed, ratio, load level, temperature, and type of lubrication. The effects of these factors are illustrated in the curves shown below.

HDUF Efficiency vs. Ratio, Temperature, and Lubricant (At Rated Torque)

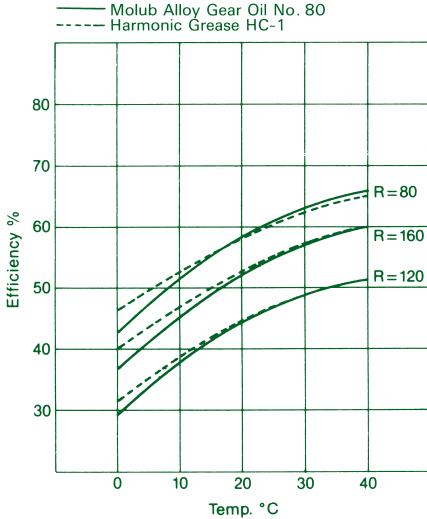

Input Speed 500 rpm

Input Speed 3400 rpm

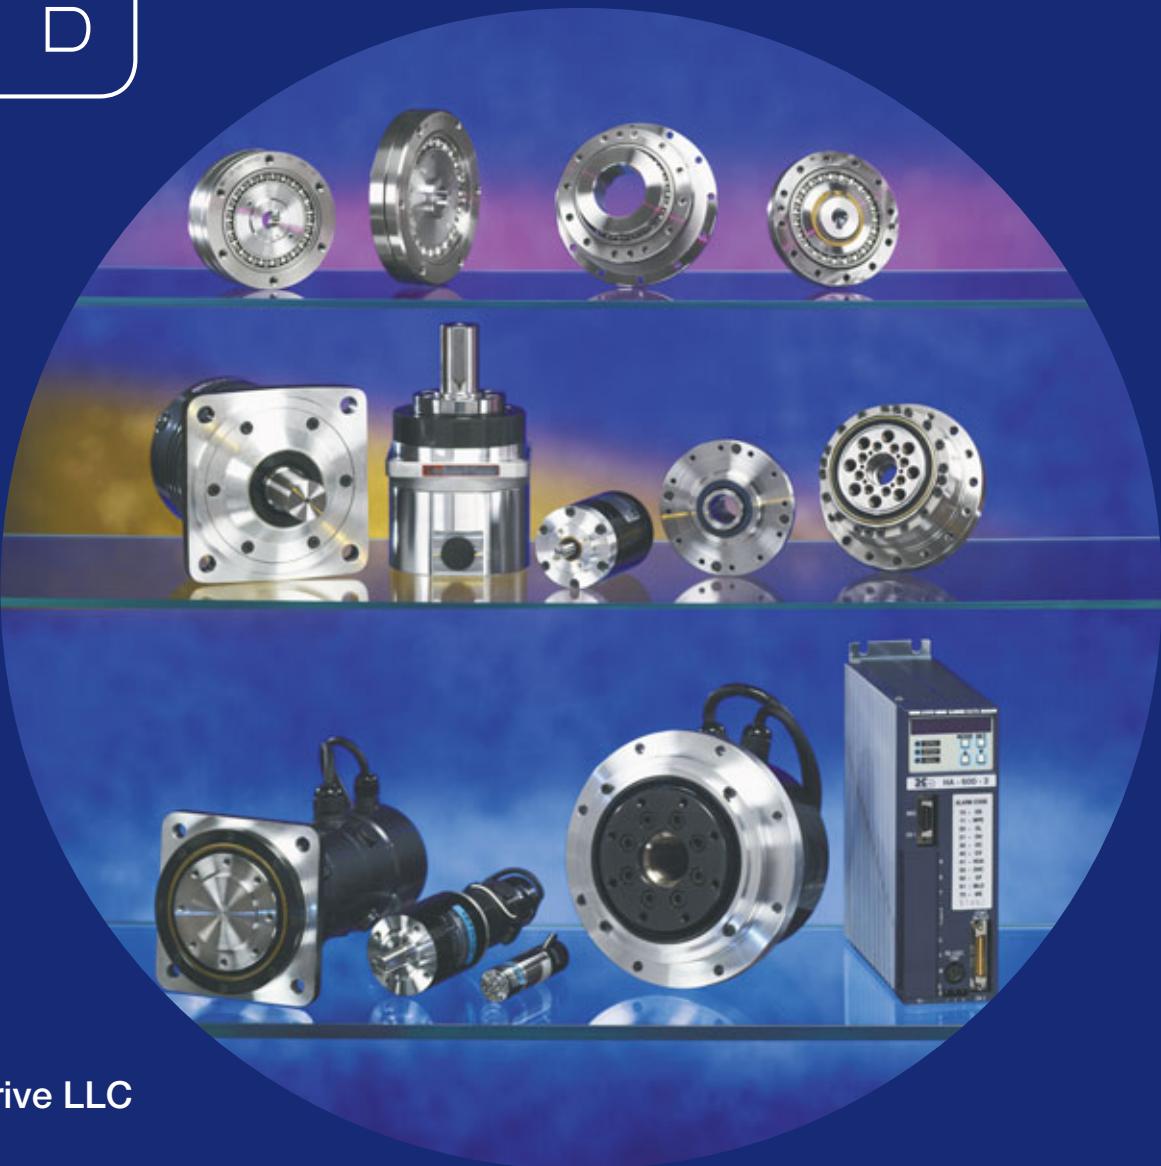

Input Speed 1700 rpm

No-Load Running Torque, Starting Torque, and Backdriving Torque

HDUF		14	20	25	32	40	50
NL Running Torque @ 1500 rpm	Ncm	3~8	5~11	6~30	15~40	20~65	60~150
	oz-in	4~11	7~15	8~42	20~56	28~90	83~210
Starting Torque	Ncm	0.5~3	0.8~4	2~7	3~10	5~30	10~60
	oz-in	0.7~4	1~6	3~10	4~14	7~42	14~83
Backdriving Torque	Nm	0.8~7	2~10	3~38	4~40	8~60	20~110
	lb-in	6~60	17~87	26~330	35~350	70~520	170~950

Values quoted are based on actual tests with the component sets assembled in housings, and takes into consideration friction resistance of oil seals, and churning of oil.
