

Harmonic Drive®

CSF-LW – Lightweight Gear Unit

Harmonic Drive now offers a NEW lightweight version of our CSF-2UH Gear Units!

30% lighter than our standard CSF-2UH!

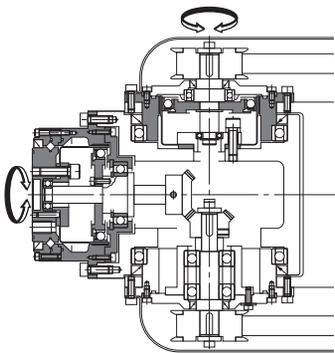

Using new lightweight materials and an optimized design, a 30% reduction in weight has been achieved without reducing the torque rating of the gear unit or changing the interface dimensions. This weight savings dramatically increases the “Torque Density” of the gear making it ideally suited for many applications including...

Industrial Robots – allowing operation with higher acceleration rates and payload capacity

Mobile Robots – allowing lower weight designs which improves battery life without sacrificing performance

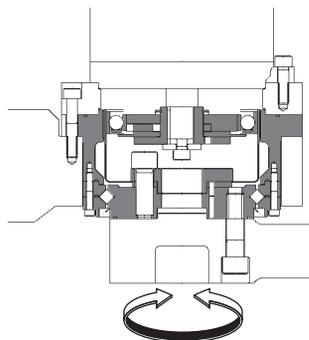

Application Examples

Robot Wrist

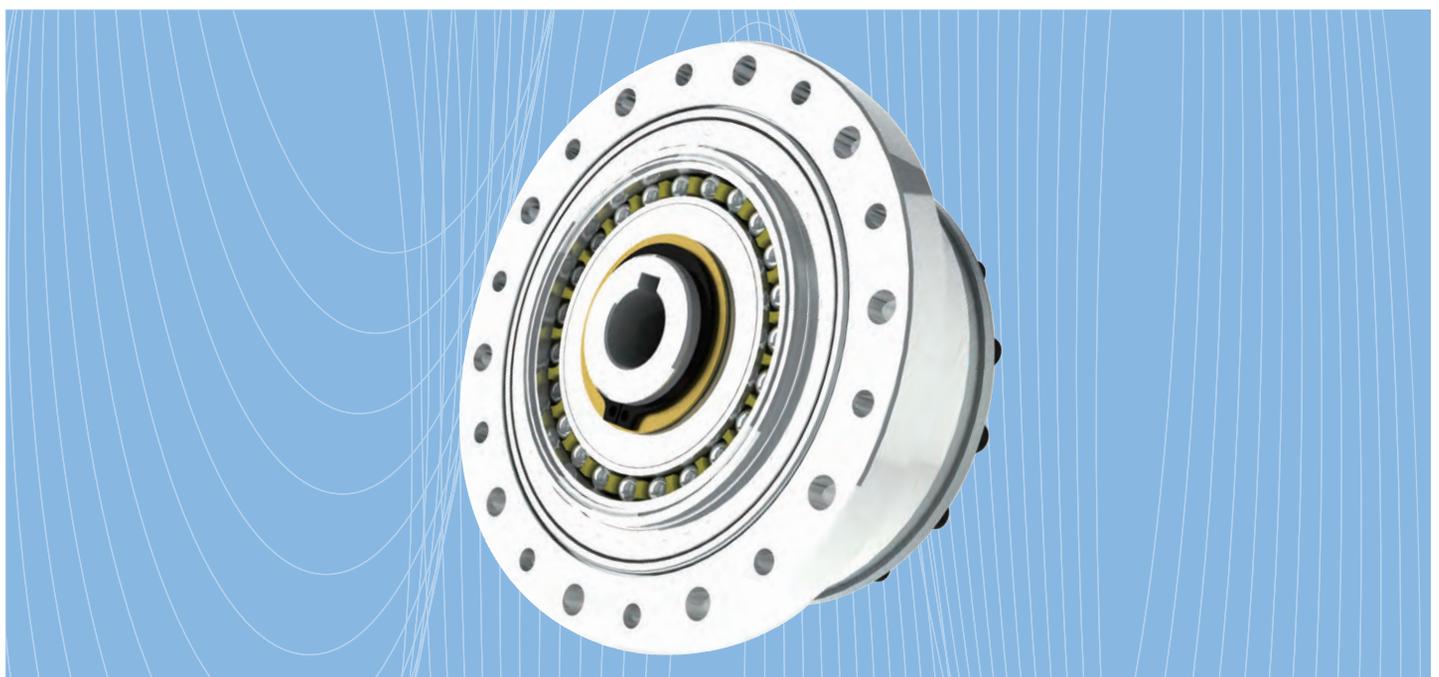

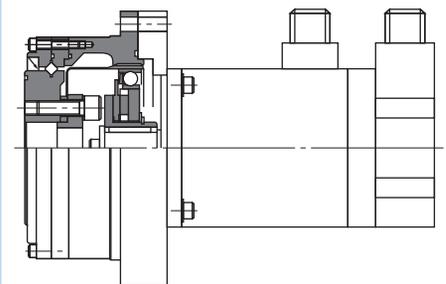

5th and 6th axis drive for the wrist of an Industrial Robot

SCARA Robot Arm

Drive for SCARA Robot

Direct Connection to a Servo Motor

Ordering Code

CSF - 25 - 100 - 2UH - LW - SP

1. Moment of Inertia: $I=1/4GD^2$. 2. Please refer to the CSF/CSG Series catalog for an explanation of terms and technical information not included in this brochure. 3. *Gear units size 50 and over with a gear ratio of 50:1 must use oil lubrication. If it is necessary to use grease, the rated torque is reduced by 50%.

No Load Running Torque

No-load running torque is the input torque (high speed shaft) which is required to rotate the Harmonic Drive® gear with no load applied to the output.

Measurement condition Table 3-1

Ratio: 100			
Lubricant	Grease	Name	Harmonic grease SK-1A
			Harmonic grease SK-2
		Grease quantity	Recommended quantity
Torque value is measured after 2 hour run-in at 2000 rpm input. Please contact HDLLC if you are using oil lubricant.			

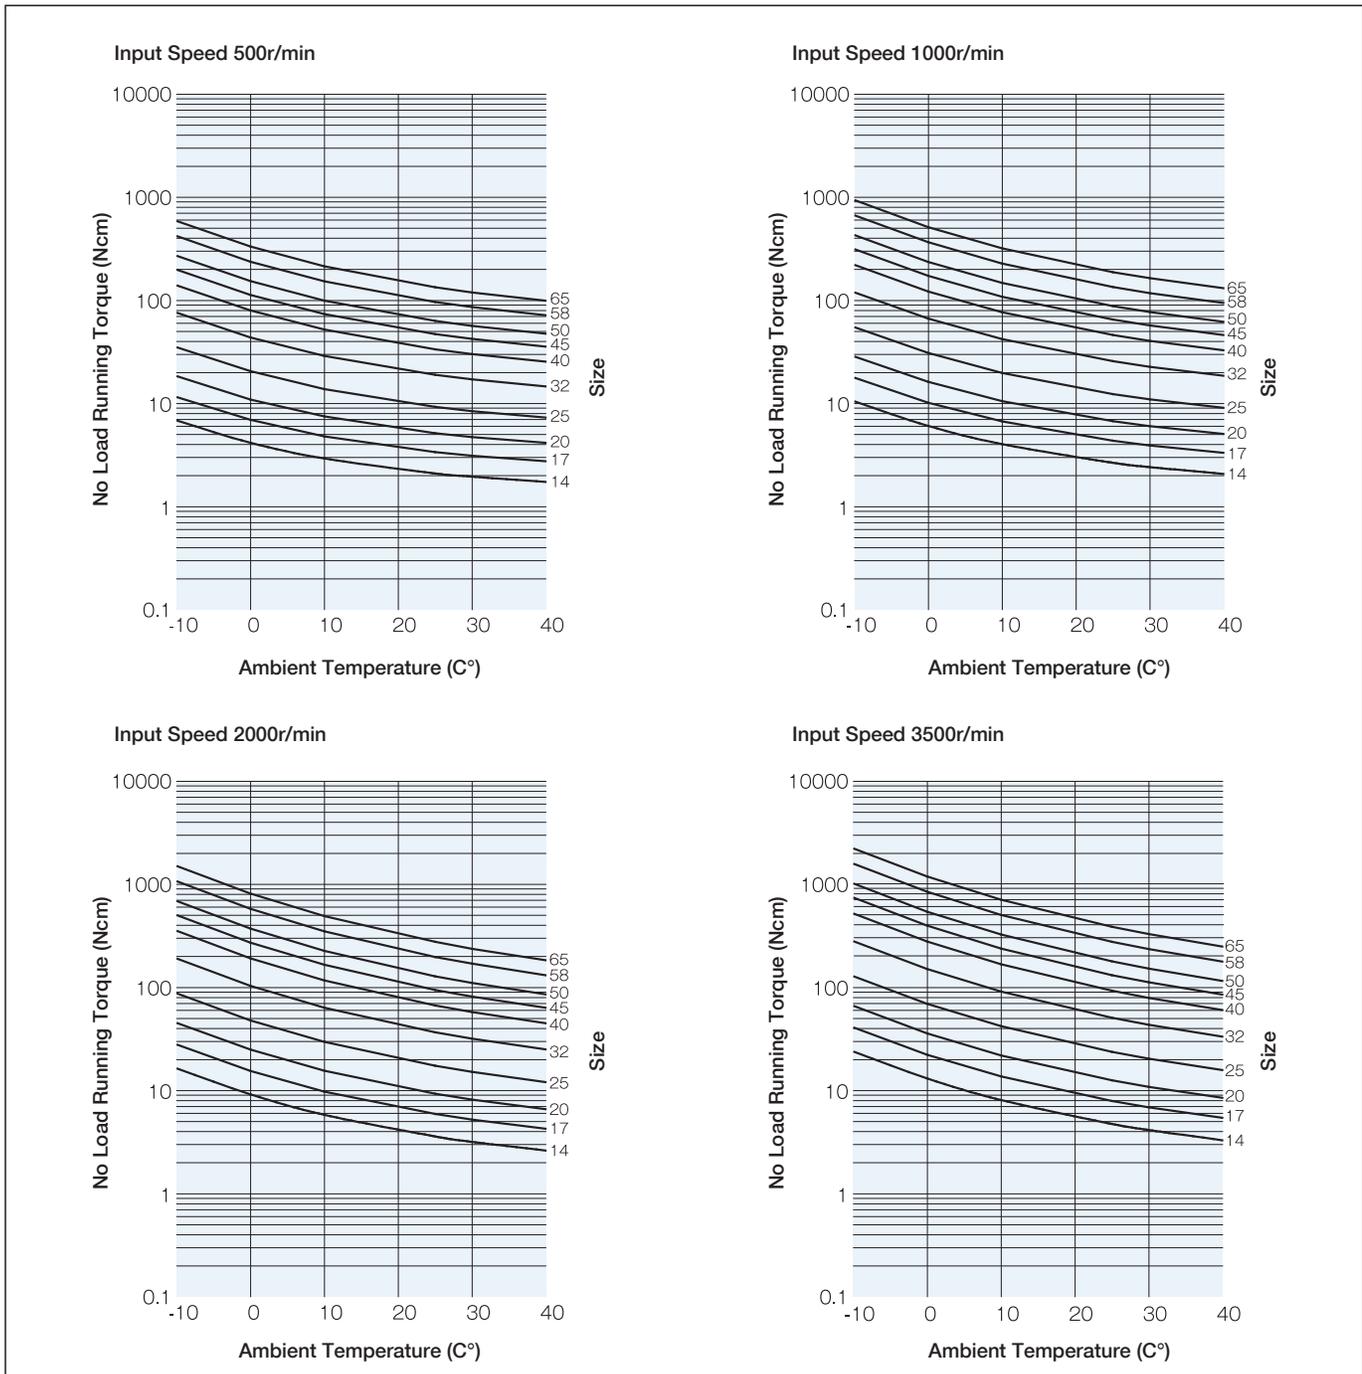

Compensation Value for Each Ratio

The no load running torque of Harmonic Drive gears varies with the gear ratio. The graphs indicate a value for ratio 100. For other gear ratios, add the compensation value from table 3-2.

Table 3-2
Unit: Ncm

Size	Ratio	30	50	80	120	160
14	2.5	1.1	0.2	—	—	—
17	3.8	1.6	0.3	-0.2	—	—

58	—	30	5.3	-3.8	-8.9	-8.9
65	—	41	7.2	-5.1	-12	-12

No Load Running Torque for Ratio 100

Efficiency

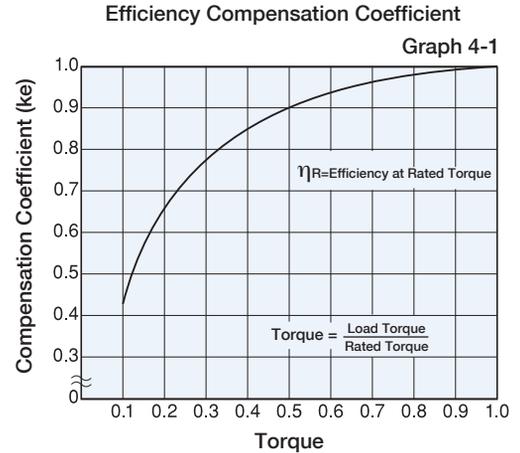

The gear efficiency is affected by many factors. Efficiency depends on the gear ratio, input speed, load torque, temperature, quantity of lubricant and type of lubricant. Efficiency values shown in the tables shown below are for rated torque. If the actual load torque is below rated torque, a compensation factor must be used.

Load Torque \geq Rated Torque : Efficiency = Efficiency from Graph
 Load Torque $<$ Rated Torque : Efficiency = Efficiency from Graph x Compensation Coefficient from Graph 4-1.

External Dimensions

Please contact Harmonic Drive LLC for installation drawings.

* Please Note: The bolts must not extend beyond the length of the threaded hole. If the length of thread engagement exceeds dimension 'Z', damage to the flexspine may occur. Please refer to installation drawing.

1. Recommended bolt : JIS B 1176 socket head cap screw strength range : JIS B 1051 over 12.9

2. Torque coefficient : K=0.2

3. Clamp coefficient A=1.4

4. Coefficient of friction: 0.15

5. Strict compliance to the recommended screw tightening torques is especially important for the lightweight aluminum housing flange. Exceeding the recommended values (over tightening) can cause deformation of the housing flange under the bolt heads. This will result in the housing slipping under full torque loads. (Please contact a Sales Engineer for more information.)
